

# Mussel Farming in the Baltic May Recycle Nutrients Into High Quality Feedstuff

Odd Lindahl  
The Royal Swedish Academy of Sciences  
at Kristineberg, Sweden

# **Nutrients – a resource to recycle:**

**Nitrogen - because the production process is climate forcing and energy demanding.**

**Phosphorus - because it is a limited resource on a global scale.**

# The natural phytoplankton community acts as a catch croop for the nutrient discharge and the mussels as grazing-animals

Nutrients

An underwater photograph showing several vertical lines of mussel farming equipment extending from the surface down into the water. The lines are densely packed with dark, textured mussels. The water is a clear, light blue-green color, and the lighting is bright from above, creating a high-contrast scene. The perspective is looking down the length of the lines, which recede into the distance.

Open landscape  
feeding in the sea**

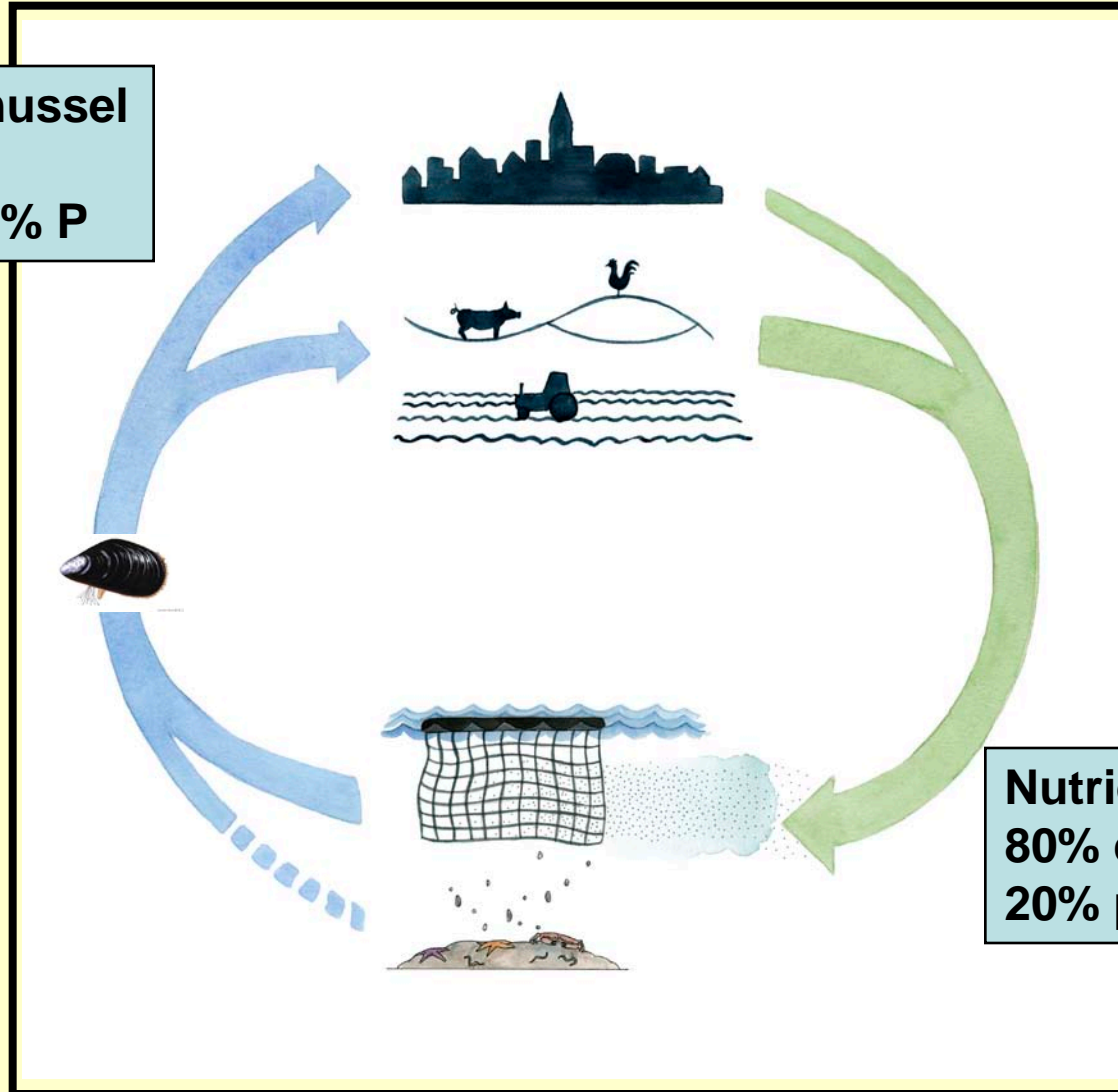

*Photo; Pia & Karl Norling*

**A mussel farm is like an floating reef and becomes a natural part of the ecosystem**

# The Agro-Aqua recycling of nutrients

A harvested mussel contains ca:  
1 % N and 0.1 % P

Nutrients to the sea:  
80% diffuse sources,  
20% point sources.

# Kalmarsund, August 2009

BALTIC SEA 2020

# Kalmarsund after 3 summers

**Estimated biomass about 12 kg m<sup>-2</sup>, 20 x20 cm mesh size**

# Cost-effective system for maximum biomass

**Seafood mussels in Sweden are paid 1 – 2 euro per kg.**

**Feed mussels can be produced at around 0.2 – 0.3 euro per kg.**

**BALTIC SEA 2020**

# **Farming feed mussels – *an example of calculation***

## **Farming**

**Feed mussels cost 0.2 – 0.4 euro per kg to produce.**

**The feed industry can pay the farmer at most 0.1 euro.**

## **Process**

**Transportation and processing of feed mussels to mussel meal is estimated to at most 1 euro per kg.**

## **Feed Market**

**Mussel meal can be produced for 2.5 – 3 euro per kg.**

**To be compared with fish meal which today costs about 1.2 euro, but the price is slowly increasing.**

# Farming feed mussels – *an example of calculation*

## Farming

Feed mussels cost 0.2 – 0.4 euro per kg to produce.

The feed industry can pay the farmer at most 0.1 euro.

**The farmer must also get paid 0.1 – 0.3 euro per kg for the nutrient harvest.**

## Process

Transportation and processing of feed mussels to mussel meal is estimated to at most 1 euro per kg.

## Feed Market

Mussel meal can be produced for 2.5 – 3 euro per kg.

To be compared with fish meal which today costs about 1.2 euro, but the price is slowly increasing.

# **Feed and environmental mussels - a ruling condition:**

**The mussel farmer must get paid for the environmental benefit performed.**

**A win-win situation can thereby be created between society, environment and aquaculture.**

# Feed and environmental mussels - a ruling condition:

**The mussel farmer must get paid for the environmental benefit performed.**

**A win-win situation can thereby be created between society, environment and aquaculture.**

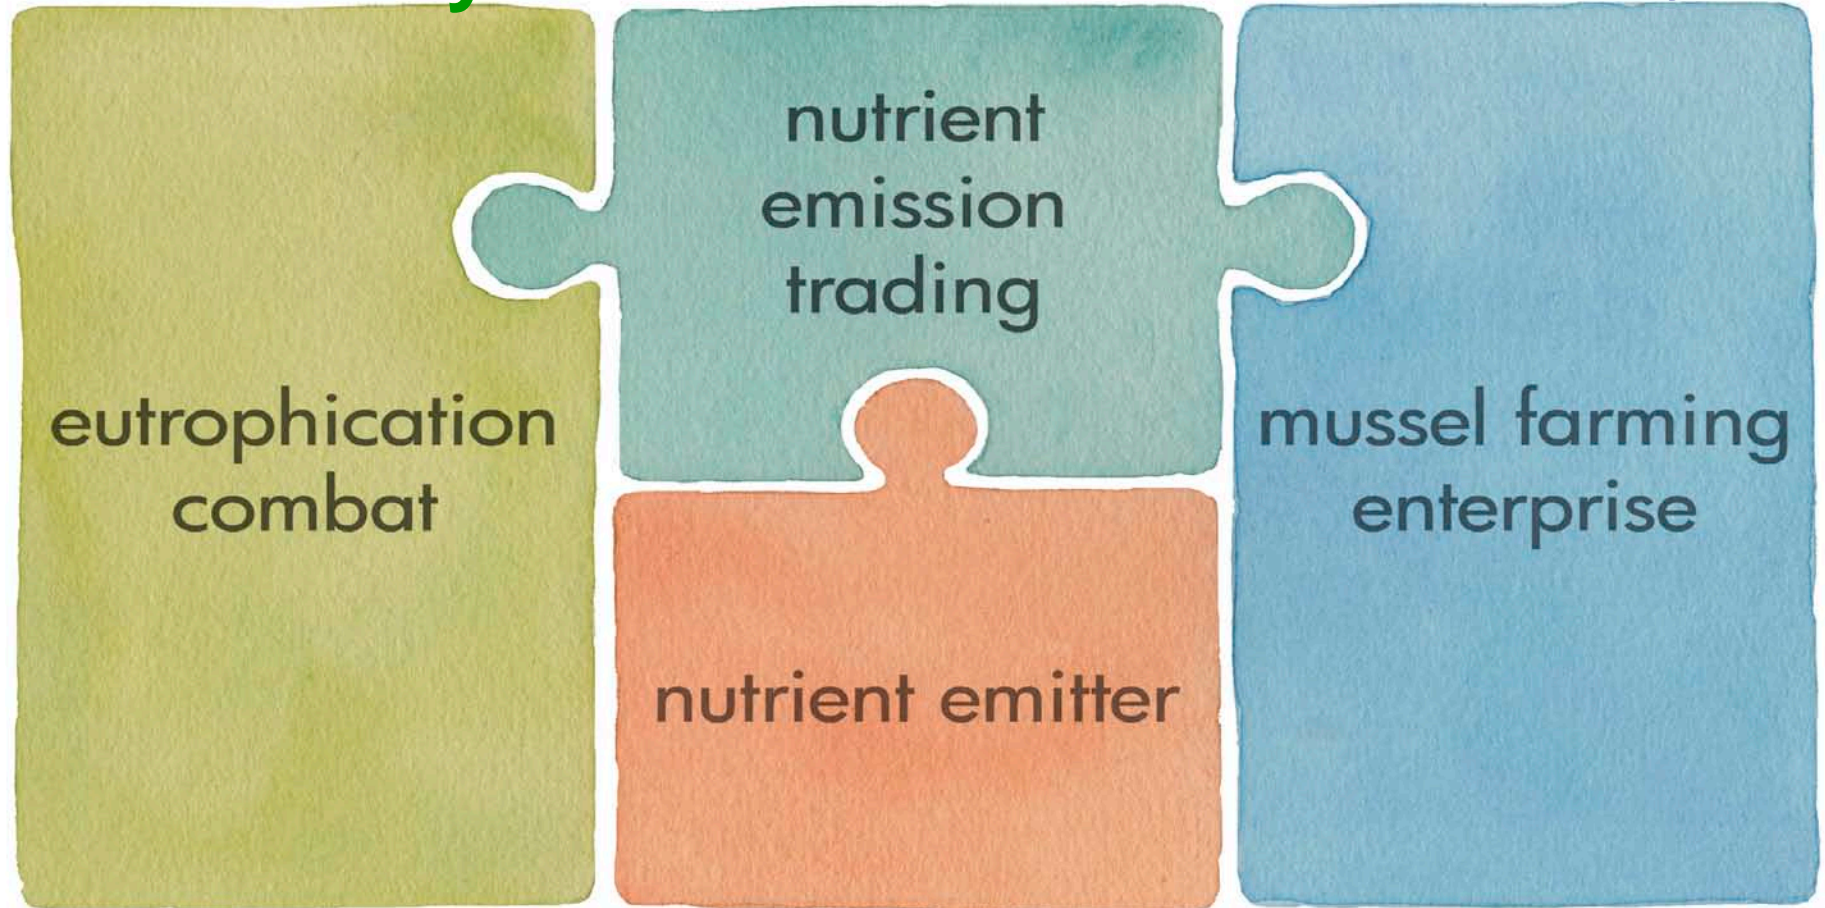

***But according to which principle shall the mussel farmer get paid?***

# Nutrient trading as a part of coastal zone management

**Environmental  
economy**

**Market  
economy**

# Environmental measures in agriculture comparable with mussel farming

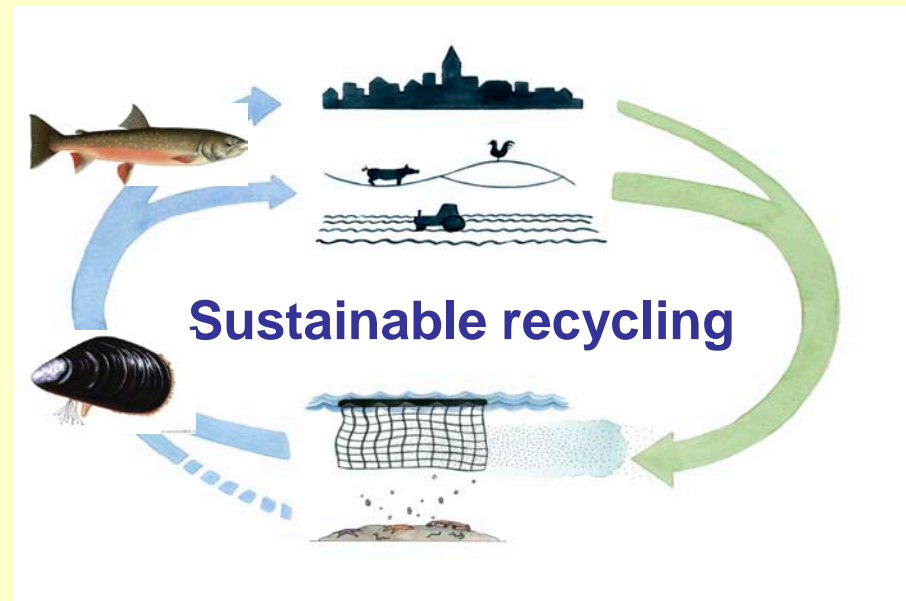

Cost = 10 – 30 euro/kg N

Corresponds to 0.1 – 0.3 euro per kg mussels and is the payment to the mussel farmer the environmental service provided.

**Thank you for  
your attention**

**Make the  
environment and the  
future a favour –  
farm more mussels**
